

Delivering Business Solutions Using Microsoft® SharePoint® Technologies

While Microsoft SharePoint may provide an out-of-the-box solution, many business and organizations require functionality that goes beyond the standard capabilities for web publishing, collaboration, document management, content management, enterprise search, business intelligence, and business process automation. eBiz Enable, Inc. can help you meet your organization's unique requirements by providing professional services for planning, developing, and implementing custom extensions to SharePoint.

We use a development approach that identifies the key success criteria for your project and ensures that all project tasks stay focused on meeting your business objectives. Our goal is to increase your system's effectiveness while reducing overall development and operational costs.

Professional Services

eBiz Enable, Inc. provides the following professional services for customizing and extending SharePoint:

Planning

- Analysis of your unique requirements to determine which capabilities can be implemented using standard SharePoint functionality and to identify capabilities requiring custom development
- Design of SharePoint customizations and extensions that meet initial implementation needs while remaining flexible to meet future requirements
- Analysis of document and content migration requirements for moving data between SharePoint and other systems
- Identification of the best approach for performing SharePoint version upgrades in your particular environment

Development

- Development of customizations for branding, navigation, web pages, web parts, data views, and workflow
- Development of custom web parts, event receivers, site definitions, list definitions, data validation code, and workflow activities
- Development of custom software to integrate SharePoint with other information systems, web services, and databases such as SQL Server® and Oracle®
- Pre-upgrade testing of version upgrades in isolated environments
- Testing of document and content migration scenarios

Implementation

- Creation of PowerShell scripts to automate the deployment of custom software to testing, staging, and production environments
- Installation and testing of SharePoint solution packages (WSPs)
- Implementation of SharePoint version upgrades
- Migration of document and content between SharePoint and other systems

About Us

Located in Ellicott City, Maryland, eBiz Enable, Inc. has been providing software development services in the Baltimore and Washington D.C. areas since 1995. As a member of the Microsoft Partner Program, our primary focus is developing custom information system solutions using Microsoft technologies such as SharePoint, SQL Server, and the .Net Framework. We provide our high-quality professional services to government, commercial, and international clients.
